

Riverside Park Trail Project

This project would connect the trail along the river in Mandt Park with a proposed service road in Riverside Park. It would consist of a 250 foot link that would run east / west along the post dam collection area and ending in the center of Riverside Park.

At this time the Street Department is planning an asphalt path connecting the dam with Riverside Dr. The trail would intersect with this road and continue with the trail east of the cemetery.

I would also like to see 1) a parking lot attached to the service road to serve fishing and park customers and 2) a path for ADA accessibility to the proposed fishing pier.

250' x 10' wide x 2" deep w/base (installed) = \$6000

This link is part of an overall plan to connect the city from east to west along the southern edge. In the short term a segment of trail would connect the eastern end of Mandt Park to Lowell Park.
